PROFESSIONAL SUMMARY

Engineer with 8 years in customer-facing technical roles: a consultant embedded at Jaguar Land Rover, then helping Volkswagen Group partner engineers adopt FiveAI / Bosch's simulation toolchain. I fix integration problems, build Python tools and AI agent skills, and check AI output carefully before relying on it. I learned Python on the job with AI-assisted coding, pick up new technology quickly, and I'm keen to learn Azure and Microsoft 365.

WORK EXPERIENCE

Lead Application Engineer (Solutions & Integration)

10/2021 – Present

FiveAI / Bosch — Cambridge, United Kingdom

- **Customer adoption:** Trained Volkswagen Group partner engineers on our simulation toolchain (ADA project) and was a founding member of the Simulation EcoSystem solutions team.
- **Integration issues:** Diagnosed problems across partners' toolchains, maps and add-on tools from the error logs between APIs and simulation tools, and got the right team to fix them.
- **AI agent skills:** Built a GitHub Copilot / Copilot CLI helper that turns regulation and Euro NCAP rules into test scenarios. Used project-wide, it cut scenario writing from about a day to about an hour.
- **Reliable AI output:** Gave the agent golden examples and a rules file, checked its output by hand and added validation checks that run after each scenario. Taught colleagues to check AI output, not just trust it.
- **Python tools:** Built tools with AI help (JSON parameter GUI, uploader, data pipelines into dashboards). Work in the project monorepo with a dev container, CI pipeline and pull requests.
- **Requirements to results:** Turned UN R79, Euro NCAP and customer requirements into KPIs across 1,000+ hours of test data, and wrote 120+ parameterised scenarios plus reusable Euro NCAP templates.
- **Team lead:** Led five engineers for a year (technical lead, not line manager) and taught them our tools.

ADAS Systems Engineer (Feature Owner)

11/2018 – 10/2021

AVL Powertrain UK — Coventry, United Kingdom

- **Client-embedded consulting:** Two years at Jaguar Land Rover as feature owner for three radar features (Rear Cross Traffic Alert, Blind Spot Monitor, Rear Pre-Crash); link between JLR, AVL and the supplier.
- **Requirements to tests:** Turned customer needs into use cases and requirements (DOORS, MKS Integrity, ASPICE) and tested them on HiL / ViL rigs, in vehicles and on the proving ground.
- **Issue resolution:** An alert passed on the rigs but fired late on the track. Using synchronised camera, CAN and radar logs, I traced it to the edge of the radar's field of view and verified the supplier's fix.
- **Also:** Checked returned range-extender generators at the LEVC factory for supplier root cause analysis; wrote ISO 26262 requirements for a lane change feature and took part in its FMEA.

Part-Time Teacher, Space Camp Turkey, 2013 – 2017: taught science and space technology to students aged 9 to 16.

Mechanical Engineering Intern, TEMSA Global, 2014: electric bus powertrain sizing in MATLAB / Simulink.

EDUCATION

MSc Sustainable Automotive Engineering, WMG, University of Warwick, 2017 – 2018. Grade: 2:1 (Merit).

BSc Mechanical Engineering, Ege University, Izmir, 2011 – 2017.

SKILLS

AI	GitHub Copilot and Copilot CLI agent skills, AI-assisted coding, checking AI output against rules and test results, running a VLA model locally in Docker (user level)
Software	Python (written with AI help), JSON, Git and pull requests, CI pipelines, dev containers, Linux (main workstation for 5 years), VS Code; C++ (reading)
Customer & delivery	On-site client work, training users, requirements gathering, supplier coordination, root cause and log analysis (Vector CANoe / CANape)
Domain	Automated driving simulation (OpenSCENARIO 2), HiL / ViL and vehicle testing, Euro NCAP, UN R79, ISO 26262 and SOTIF (trained), MATLAB / Simulink
Other	English (C2), Turkish (native); full UK driving licence; happy to travel and relocate in the UK
