Dear Hiring Team,

Re: Lead Engineer – Vehicle Systems, Alexander Dennis

I am applying for the Lead Engineer – Vehicle Systems role in your Advanced Engineering & Concepts team. I am a systems engineer with eight years in automotive product development, and sustainable public transport is where I want to use that experience. My first engineering work was an internship at TEMSA, a bus and coach maker, sizing a new electric bus powertrain, and my MSc at Warwick was in Sustainable Automotive Engineering.

At AVL I spent two years on-site at Jaguar Land Rover as feature owner for three radar-based driver assistance features, from requirements to testing. I wrote use cases, state diagrams and requirements in DOORS and MKS Integrity under the ASPICE V-model, broke them down from high to low level, defined each module's signal list and traced test cases to every system state. I tested on HiL and ViL rigs, in vehicles and on the proving ground, and was the link between JLR, AVL and the radar supplier. When a feature passed every rig test but fired late on the track, I designed the tests that traced it to the edge of the radar's field of view and verified the supplier's fix. I also wrote ISO 26262 safety requirements and took part in an FMEA.

At FiveAI / Bosch I work on an L4 automated driving system. I turn UN R79, Euro NCAP and customer requirements into KPIs and pass/fail criteria, checked across more than 1,000 hours of test data, and I led a team of five engineers for a year. I also built an AI helper with GitHub Copilot that turns regulation text into test scenarios. It is used across the project and cut the time to write a scenario from about a day to about an hour. I taught colleagues to check AI output rather than just trust it, which is how I think AI belongs in engineering processes.

I will be honest that I have not yet used MBSE tools or SysML. My model-based work so far has been in MATLAB / Simulink and IPG CarMaker. I learn new tools quickly, as I did with OpenSCENARIO 2 and Python, and I would be keen to build MBSE skills in your team.

Your values of safety, quality and teamwork match how I like to work, and helping public transport become cleaner is work I would be proud of. I am based in Coventry and happy to work from any UK site. Thank you for your time. I would welcome the chance to talk about how I can contribute.

Yours sincerely,

Muhammet Celal Gokalp
