Dear Hiring Team,

Re: Field Deployment Engineer, Archangel Autonomy

I am applying for the Field Deployment Engineer role. I have spent nearly eight years testing, integrating and supporting autonomous and driver assistance systems, and I do my best work in the lab and in the field rather than only behind a screen. Archangel's mission of making machines into real teammates for people working in remote and dangerous places is the kind of work I want to be part of.

I will be honest about the gap first: I have not yet worked with UAVs, ArduPilot or PX4. I am ready to learn them quickly, and I plan to start with my own ArduPilot build so I can understand the flight controller, sensors and ground control software hands-on.

What I bring is real experience of getting autonomous systems to work outside the office. At AVL, I was based at Jaguar Land Rover for two years as feature owner for corner radar driver assistance features. I ran tests on HiL and ViL rigs, in vehicles and on the proving ground, and when something went wrong I was the person who found the cause and brought in the right people. For example, I traced a late warning at boundary conditions to the radar's field of view using vehicle network logs, and agreed a fix with the supplier.

At FiveAI / Bosch I work on an L4 automated driving stack. I am the first point of contact when engineers hit problems across the stack, tools, maps and simulation. I take ownership, find the root cause and work with the development teams until it is fixed. I run the stack on Linux in a dev container, write Python tools, and have tested autonomy behaviour across more than 1,000 hours of real-world and simulation data.

Outside work I am always building or fixing something. At university I designed, built and programmed a 6-DOF motion platform, and at home I repair my own cars and build my own computers. I have a full UK driving licence, I am happy to travel 25–50% in the UK and abroad, and as a British national I am willing to undergo security clearance. I would be glad to relocate to Oxford.

Thank you for considering my application. I would welcome the chance to talk about how I can help deploy and support your systems in the field.

Yours sincerely,

Muhammet Celal Gokalp
