Dear Hiring Team,

Re: Test Engineer (R-00187297), Leidos UK

I am applying for the Test Engineer role. I have spent nearly eight years testing safety-related automotive systems, first driver assistance features at Jaguar Land Rover and now an automated driving stack at FiveAI / Bosch. Most of my work has been end-to-end verification and validation of complex systems with large requirement sets, which is what this role is about.

At AVL, based at Jaguar Land Rover, I worked within an ASPICE V-model process. I broke high-level requirements down into low-level ones in DOORS and MKS Integrity, wrote test cases for each system state, and traced them back to the requirements. I then ran integration and system tests on HiL and ViL rigs and on the proving ground, used Vector CANoe and CANape to find root causes, and managed defects in RTC/RQM through to closure.

At FiveAI / Bosch, I design and run large simulation test suites. I have built 120+ parameterised scenarios that generate thousands of test cases, run regression through our test pipeline, and checked results against pass/fail and performance KPIs, such as comfort limits on acceleration and deceleration across more than 1,000 hours of test data. I write Python to automate validation, and I have built internal test tools and data pipelines so the wider team can see results more easily. I work in agile teams day to day, having come from a V-model background.

I should be honest about the gaps. I have not used Robot Framework or Selenium in a project, and I have not worked with Model-Based Systems Engineering. I learn new tools quickly; at FiveAI I picked up OpenSCENARIO 2 and a new simulation toolchain and was soon writing scenarios used across the team. With my Python background, I expect to become productive in Robot Framework and Selenium quickly.

I am a British national and have lived in the UK for over eight years, and I am willing to undergo SC clearance. I would welcome the chance to discuss how I can support your test programmes.

Yours sincerely,

Muhammet Celal Gokalp
